

Transforming Alzheimer's Disease and Related Dementia Research: New Core Digital Clinical Measures

*Digital Health Measurement
Collaborative Community*

by **DIME**

ALZHEIMER'S DISEASE
& RELATED DEMENTIAS

Digital Measures Development

WEBINAR

Thursday, November 14

11 am - 12 pm ET

RECORDINGS POSTED HERE

- **Welcome and background of project**
- Opening remarks
- Fireside chat: Supporting patients and care partners with Digital Measures of ADRD
- Overview of research conducted, core measures & resources
- Panel discussion - Why digital measurement makes a clinical difference
- Panel Discussion - The use of technology in ADRD clinical research
- Panel discussion - The importance of the out of lab ADRD assessment
- Closing remarks

But first, housekeeping

⇒ **Today's session is being recorded.**

- Slides and recording will be available on [DiMe's webinar page](#) after the session

⇒ **Type your question** into the chat box for discussion during live Q&A.

⇒ **Participants are not permitted to transcribe this webinar.**
Violators will be removed from the session

DiMe convenes stakeholders to take action to fix the problems in our complex field

OUR MISSION:

To advance the safe, effective, and equitable use of digital approaches to **redefine healthcare** and **improve lives**

OUR VISION:

Better health powered by digital innovation

ALZHEIMER'S DISEASE & RELATED DEMENTIAS

Digital Measures Development

*Identifying Patient Specified
Digital Measures in Alzheimer's
Disease and Related
Dementias*

Project Partners

abbvie

Digital Solutions Collaborators

Also funded by

Digital Measures Development

We conducted **worldwide** primary
and secondary research across
the whole ADRD spectrum

A systematic literature review

2,020 Articles recovered from
the literature screened down
to **24**

10 Symptom Groups
6 Impact Groups

An international study

1007 Participants with clinical
diagnosis

6 Countries, **14** sites

Patient, Care Partner and
Physician perspective

A library of available technology

84 different technologies

125 pieces of evidence

All used by **A Delphi Panel of 20 Experts** over **3 rounds** of review

SYMPTOMS

Cognitive

Neuropsychiatric & Behavioral

Physical

Communication & language

Memory & forgetting

Concentration & clear thinking

Sleep behavior & disturbance

Neuropsychiatric

Behavioral

Physical symptoms

Difficulty following conversation
Trouble finding words
Reduced speech content
Reduced talking bouts
Question repetition

Trouble remembering names
Forgetting meals
Forgetting object placement
Object misplacement
Short-term memory formation
Trouble remembering destinations & directions
Long-term memory abolition

Confusion
Planning and organizing
Problems organizing daily life
Orientation/awareness of day/time/people
Thinking the present is the past
Looking for people who are gone

Sleeping during the day
Nightmares
Tiredness due to lack of sleep
Sleeping more
Waking in the night
Change in sleep routine
Not being able to get to sleep

Anger & aggression
Agitation
Apathy
Mood change
Frustration
Depression
General anxiety

Wandering

Decline in physical strength
Swallowing
Weight loss

Physical functioning

Unsteadiness & falls
Stiffness & slowness
Worsening gait
Reduced mobility

IMPACTS

Activities of daily living

Independence

Emotional

Social/leisure/relationship

Work

Carepartner

Cleaning
Cooking
Nutrition & appetite
Danger related to forgetting
Forgetting how to conduct specific tasks
Loss of driving ability
Remembering to take medication on time

Independence in choosing to do activities
Reliance on others
Organizing daily life
Toileting
Self hygiene
Dressing
Loss of travel independence

Anxiety about disease progression
Anxiety about reliance on others
Anxiety about moving to care situations
Feelings of being a burden
Sadness about condition

Loneliness
Withdrawing from conversation
Less interest in hobbies

Increasing isolation from friends & family
Reduced interest in social situations
Withdrawing from social groups due to impact of cognition issues
Arguing

Initial reduced ability to work
Having to stop work
Not accepting mistakes at work

Loneliness
Change in/loss of relationship
Reduced/lack of free time
Carepartner sleep disruption
Impact on carepartner's capacity to work

Our mixed methods study showed alignment between people with ADRD, their care partners and physicians

The study presented areas from the systematic review and asked participants which aspects they would like to see improve and not worsen

- Performing activities of daily life
- Living life independently
- Communication

- Performing activities of daily life
- Emotions
- Communication

- Essential bodily function
- Living life independently
- Communication

“I hope she remembers where her things are.”

“The words would come easily and I wouldn't have to get out of awkward situations.”

“I worry when I can't sleep I lie down and can't sleep, I get worried I often wake up at night.”

“If my mobility were to worsen, I may become a further fall risk, and I wouldn't be able to enjoy all of the rooms of my home. I would simply sit on the couch and wait for my bedtime.”

Technology types

63% ambient or non-wearable

34% wearables

3% both

84 Identified technologies

125 Pieces of evidence... *so far.*
It's still growing!

Top 3 Health concept areas

Neurocognition

Physical activity

Sleep

Top 3 Technology form factors

Smartphone/tablet

Strap/brace

Watch or wristband

Using **V3+**

Verification: **1** technology

Usability validation: **13** technologies

Analytical validation: **57** technologies

Clinical validation: **83** technologies

Top 3 Locations for wearables

- Wrist
- Chest/torso/waist/trunk
- Head/scalp

Delphi Panel

We conducted 1:1 interviews with our ADRD partner experts using the generated evidence

Partners had to select and justify areas of measurement based on:

- Maturity for digital measurement
- Explainability of the measure and its importance
- Patient and care partner relevance
- Clinical relevance
- ADRD spectrum coverage

**ALZHEIMER'S DISEASE
& RELATED DEMENTIAS**

Digital Measures Development

Visuospatial Memory

Remembering where things are

Expressive Communication

Speech fluency and word finding

Sleep Disturbance

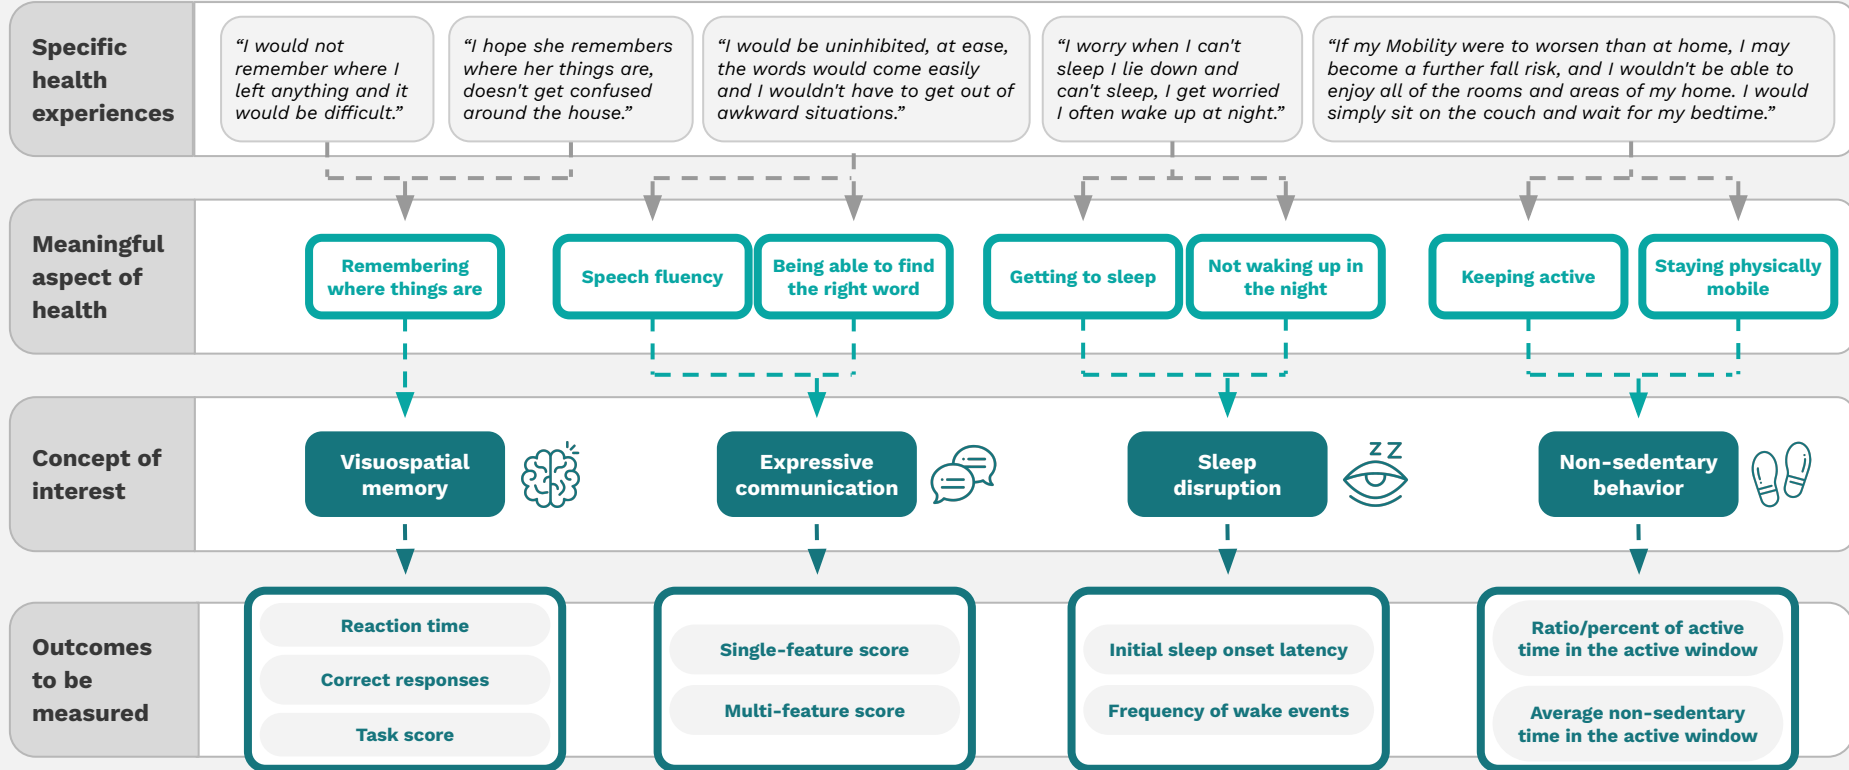

Getting to sleep and staying asleep

Non-sedentary Behaviour

Keeping active, staying mobile

Core Digital Measures of ADRD conceptual model

Examples of measurement approaches

Augmented reality (AR)-based place and find, visuospatial paired associate learning

Picture description task, structured word finding

Actigraphy-based sleep measurement, at-home electroencephalogram (EEG)

Actigraphy-based activity measurement

ALZHEIMER'S DISEASE & RELATED DEMENTIAS

Digital Measures Development

*We have developed resources
to help you implement the core
measures in your work*

Select and Evidence

Use the library of digital measurement product to find evidence for digital health technologies available today

Interrogate and Support

Access our mixed methods study data and re-analyse it to your specific needs

Plan and Report

Download our discussion guides, conceptual model and template text to help you describe the background and implementation of the core measures in your work
